

- **VM SERIE**

The attraction and holding of magnetic pieces are made by permanent magnets mounted in the electromagnet, with these kind of products we avoid the risk of load falling down due to sudden power supply failure. The power supply on the coil allows to loose the load, when this power supply stops, the product recovers its initial force.

When working with suspended loads, security norms must be respected.

Protection rate: **IP65**
Insulation class: **B (130°C)**
Standard voltage: **24VDC**
Standard duty cycle: **ED100%**
Different voltage, ED or size: **Consult**

Flying leads for every size

Supply possibilities under demand:

.With sampling screw from the V

.With connector from the VM65.

The connector (1) has 4 possibilities of direction ($4 \times 90^\circ$) and it is possible to be incorporated to the same diodes of rectification for alternating current connection (AC).

The table 2 gives for each type of holding magnet, the values of the force of maintenance (F_m) based on the air gap, measured in the following conditions:

- Holding magnet without voltage.

-Flat piece (3 μ m rugosity) in A^oSt37, thickness as shown in the table 2 and dimensions are similar or bigger than the attraction face.

-Room temperature 35°C.

- Coil working on its regime temperature.

At different conditions, the magnetic force(F_m) may decrease. The value of the magnetic remanence after the power supply stops is 5% of the holding force.

- Earthing is recommended if the metallic parts are accessible.
- Technical explanation: see page 4 & 5.

.Under demand: any size, voltage, duty cycle etc can be manufactured.

When lifting or handling heavy loads a minimum security margin of 3 must be respected, the weight of the load cannot exceed 33% of the magnetic force.
