

Application Solution Door Locking Systems

Closing and locking of oven doors

The continuous trend towards automation in the food & beverage industry calls for new closing and locking systems.

The new Kuhnke motorised lock from Kendrion combines mechanical locking, an electric drive, end position sensors and electronics into one compact unit. This motorised lock allows the control of multiple locking positions. In this way a lock design may include special safety positions for added protection of the operator additionally to all standard safety aspects.

When it comes to locking systems, Kendrion Kuhnke Automation can point to a wealth of experiences and is able to provide an optimised and custom designed solution for any customer-specific application.

- ✓ Large locking range (40 mm)
- ✓ Constant closing force (up to 400 N)
- ✓ Robust and durable mechanic design
