

DMHD – Technical Features

Standard Features

- Self-supporting column in extruded anodized aluminium with high load torque capability
- Onboard electronics with many optional functions
- 12 or 24 Vdc as standard input voltages
- Static load up to 18 kN (4050 lbf)
- Dynamic load up to 16 kN (3584 lbf)
- Stroke up to 600 mm
- Speed up to 71 mm/s (2.8 in/s)
- Protection class static IP65
- Rugged, robust and strong
- T-slot grooves along the entire profile
- Maintenance free

General Specifications

Screw type	ball
Nut type	load lock ball nut
Manual override	no
Anti-rotation	yes
Static load holding brake	yes
Safety features	Electrak monitoring package: current monitoring voltage monitoring temperature monitoring load trip point calibration internal end-of-stroke limit switches ⁽¹⁾ end-of-stroke dynamic braking
Electrical connections	cable with flying leads
Compliances	CE

(1) Dynamic braking is included at the ends of stroke for all DMHD actuators. Dynamic braking offered throughout the entire stroke length only on low-level switching and J1939 options.

Optional Electronic Control Features

CANopen CAN bus
SAE J1939 CAN bus
Synchronization option
Low-level switching
End-of-stroke indication output
Analog position output
Digital position output

Control Option Combinations

Same as for Electrak HD - see table on page 20

Accessories

T-slot bolts

Compatible Controls

Contact customer support at www.thomsonlinear.com/cs

DMHD – Technical Specifications

Mechanical Specifications

Max. static load ⁽¹⁾	[kN (lbf)]	18 (4050)
Max. dynamic load (Fx)	[kN (lbf)]	
DMHDxxB017		1.7 (382)
DMHDxxB026		2.6 (585)
DMHDxxB045		4.5 (1012)
DMHDxxB068		6.8 (1529)
DMHDxxB100		10 (2248)
DMHDxxB160		16 (3584)
Max. load torque, dyn. and static	[Nm (lbf-in)]	710 (6284)
Speed @ no load/max. load ⁽²⁾	[mm/s (in/s)]	
DMHDxxB017		71/58 (2.8/2.28)
DMHDxxB026		40/32 (1.6/1.3)
DMHDxxB045		24/19 (0.94/0.75)
DMHDxxB068		18/14 (0.71/0.55)
DMHDxxB100		11/9 (0.43/0.35)
DMHDxxB160		7/5 (0.27/0.21)
Min. ordering stroke (S) length	[mm]	100
Max. ordering stroke (S) length ⁽³⁾	[mm]	600
Ordering stroke length increments	[mm]	50
Operating temperature limits	[°C (F)]	-40 – 85 (-40 – 185)
Full load duty cycle @ 25 °C (77 °F)	[%]	25 ⁽⁴⁾
End play, maximum	[mm (in)]	1.2 (0.047)
Protection class - static		IP65

¹ Max. static load at fully retracted stroke.

² For units with the synchronization option, the speed is 25% lower at any load.

³ 500 mm max. for 16 kN

⁴ For DMHDxx-B100 and DMHDxx-160, unidirectional load, the duty cycle is 15%.

Electrical Specifications

Available input voltages	[Vdc]	12, 24
Input voltage tolerance	[Vdc]	
DMHD12 (12 Vdc input voltage)		9 - 16
DMHD24 (24 Vdc input voltage)		18 - 32
Current draw @ no load/max. load	[A]

DMHD – Electrical Connections

Option Type EXX		
Actuator supply voltage	[Vdc]	
DMHD12		12
DMHD24		24

F Fuse
S1 Double pole double throw switch

Control option EXX contains Electrak Monitoring Package features, guaranteeing safe operation of the actuator and equipment. With control option EXX, the polarity of the motor voltage is switched by a customer-supplied switch (switch, relay, etc.) to make the actuator extend or retract. The switch, power supply, wiring and all other components must be able to handle the motor current for the actuator model and load being used, as well as the inrush current (up to three times the max. continuous current for the max. load being used for up to 150 milliseconds).

Option Type ELX		
Actuator supply voltage	[Vdc]	
DMHD12		12
DMHD24		24
Output contact type		potential free
Limit switch max. switch voltage	[Vdc]	140
Limit switch max. switch current	[mA]	350
Limit switch max. switch power	[W]	5

F Fuse
S1 Double pole double throw switch

Control option ELX works as option EXX but also has two outputs that indicate when the extension tube is in its fully extended or retracted position.

DMHD – Electrical Connections

Option Type EXP		
Actuator supply voltage	[Vdc]	
DMHD12		9 - 16
DMHD24		18 - 32
Potentiometer type		wire-wound
Potentiometer max. input voltage	[Vdc]	32
Potentiometer max. power	[W]	1
Potentiometer linearity	[%]	± 0.25
Potentiometer output resolution	[ohm/mm]	
50 - 100 mm stroke		65.6
150 - 250 mm stroke		32.8
300 - 500 mm stroke		19.7
550 - 600 mm stroke		9.8

F Fuse
S1 Double pole double throw switch

Control option EXP works as option EXX but also has an analog (potentiometer) output that will provide feedback on the extension tube position.

Option Type EXD		
Actuator supply voltage	[Vdc]	
DMHD12		9 - 16
DMHD24		18 - 32
Encoder type		hall effect
Encoder input voltage	[Vdc]	4 - 24
Encoder output voltage levels	[Vdc]	
low (logical zero), typical / max.		0.1 / 0.25
Encoder resolution	[mm/pulse]	
DMHDxx-B017		0.28
DMHDxx-B026		0.15
DMHDxx-B045		0.09
DMHDxx-B068		0.07
DMHDxx-B100		0.04
DMHDxx-B160		0.03

F Fuse
S1 Double pole double throw switch

Control option EXD works as option EXX but also has a single-channel encoder output that will provide feedback on the extension tube position.

DMHD – Electrical Connections

Option Type ELP

Actuator supply voltage	[Vdc]	9 - 16 18 - 32
Output contact type		potential free
Max. output voltage	[Vdc]	140
Max. output current	[mA]	350
Max. output power	[W]	5
Potentiometer type		wire-wound
Potentiometer max. input voltage	[Vdc]	32
Potentiometer max. power	[W]	1
Potentiometer linearity	[%]	± 0.25
Potentiometer output resolution	[ohm/mm]	
50 - 100 mm stroke		65.6
150 - 250 mm stroke		32.8
300 - 500 mm stroke		19.7
550 - 600 mm stroke		9.8

F Fuse

S1 Double pole double throw switch

Control option ELP works as option EXP but also has two outputs that indicate when the extension tube is in its fully extended or retracted position.

Option Type ELD

Actuator supply voltage	[Vdc]	9 - 16 18 - 32
Output contact type		potential free
Max. output voltage	[Vdc]	140
Max. output current	[mA]	350
Max. output power	[W]	5
Encoder type		hall effect
Encoder input voltage	[Vdc]	4 - 24
Encoder output voltage levels	[Vdc]	low (logical zero), typical / max.
		0.1 / 0.25
Encoder resolution	[mm/pulse]	
DMHDxx-B017		0.28
DMHDxx-B026		0.15
DMHDxx-B045		0.09
DMHDxx-B068		0.07
DMHDxx-B100		0.04
DMHDxx-B160		0.03

F Fuse

S1 Double pole double throw switch

Control option ELD works as option EXD but also has two outputs that indicate when the extension tube is in its fully extended or retracted position.

DMHD – Electrical Connections

Option Type LXX		
Actuator supply voltage	[Vdc]	9 - 16 18 - 32
DMHD12		
DMHD24		
Extend / retract input voltage	[Vdc]	9 - 32
Extend / retract input current	[mA]	6 - 22

- F Fuse
S1 Extend switch
S2 Retract switch

Control option LXX has all the basic Electrak Monitoring Package features included in control option EXX, but the polarity of the motor voltage is switched by the onboard electronics instead. The customer-supplied switches used to command the actuator to extend or retract only need to handle low-level signals. However, the power supply and wiring that supply the actuator must be able to handle the motor current for the actuator model and load being used, as well as the inrush current (up to one and a half times the max. continuous current for the max. load being used for up to 150 milliseconds).

Option Type LLX		
Actuator supply voltage	[Vdc]	9 - 16 18 - 32
DMHD12		
DMHD24		
Output contact type		potential free
Max. switched output voltage	[Vdc]	140
Max. output current	[mA]	350
Max. output power	[W]	5
Extend / retract input voltage	[Vdc]	9 - 32
Extend / retract input current	[mA]	6 - 22

- F Fuse
S1 Extend switch
S2 Retract switch

Control option LLX works as option LXX but also has two outputs that indicate when the extension tube is in its fully extended or retracted position.

DMHD – Electrical Connections

Option Type LXP		
Actuator supply voltage	[Vdc]	
DMHD12		9 - 16
DMHD24		18 - 32
Potentiometer type		wire-wound
Potentiometer max. input voltage	[Vdc]	32
Potentiometer max. power	[W]	1
Potentiometer linearity	[%]	± 0.25
Potentiometer output resolution	[ohm/mm]	
50 - 100 mm stroke		65.6
150 - 250 mm stroke		32.8
300 - 500 mm stroke		19.7
550 - 600 mm stroke		9.8
Extend / retract input voltage	[Vdc]	9 - 32
Extend / retract input current	[mA]	6 - 22

- F Fuse
S1 Extend switch
S2 Retract switch

Control option LXP works as option LXX but also has an analog (potentiometer) output that will provide feedback on the extension tube position.

Option Type CNO and COO

Actuator supply voltage	[Vdc]	
DM HD12		9 - 16
DMHD24		18 - 32
Command data includes:		
• position		
• speed		
• current		
Feedback data includes:		
• position		
• speed		
• current		
• other diagnostic information		

- F Fuse

Control option CNO has an SAE J1939 CAN bus control interface/COO has a CANopen control interface that controls and monitors the actuator. Extend and retract commands are sent via CAN messages on the CAN low and CAN high pins. Address select 1, 2 and 3 pins can be used as a BCD encoded address to the default address. This can be used when multiple actuators are located on a single bus.

DMHD – Electrical Connections

Option Type SYN		
Actuator supply voltage	[Vdc]	
DMHD12		9 - 16
DMHD24		18 - 32
Extend / retract input voltage	[Vdc]	9 - 32
Extend / retract input current	[mA]	6 - 22
Number of synchronized actuators		2 +
Max. actuator speed difference	[%]	25

Control option SYN works as option LXX but also has a synchronization feature, allowing two or more actuators having the SYN option to run in integrated motion.

When using the low-level extend and retract inputs on the master actuator, the slave(s) will follow. If there is a need to run an actuator individually, it is possible to put it into an override state by closing a switch (S3) connected to the red lead as shown in the wiring diagram.

Important design notes:

- Ensure that supply voltage to each actuator is within ± 1.0 V.
- Uneven loading between the actuators is not recommended, but the synchronization option can withstand its effects up to a 25% speed loss.
- For units with the synchronization option, the speed at a given load is 25% lower than for those without. This is true irrespective of the unit being in synchronization or override mode, or simply run individually.
- If one actuator encounters an overload condition, it will trip the overload protection and send a signal to each actuator on the network to stop. The units can be immediately reversed (unless they bind up the system), or they can continue in the same direction after a power reset.
- If power is lost at any time to any actuator, the actuators still powered will continue their last commanded move until told to stop, either by an individual current overload trip, or a stop signal sent from the master actuator.
- If communication is lost (i.e. brown/blue wires cut), the slaves will continue their last commanded move until they reach end of stroke or trip current overload. The master will continue its last commanded move unless commanded to stop with the switching leads, reaching end of stroke, or tripping current overload.
- After a large number of mid-stroke movements, the time difference between each unit receiving a signal to move (master vs. slave) will add to small variances in when the units start and stop. Since they are designed to run at the same speed, these small differences amount to a variance of position over time – even when load is applied. To address this concern, Thomson suggests running the units either to a fully extended or fully retracted position each cycle to re-align the units with each other to take out these added variances.
- In order to give the master and slave(s) enough time to communicate there must be at least 250 ms between each start and stop command.

DMHD – Accessories

T-slot Bolt	
Designation	Part Number
M10 T-slot bolt	D800041

The T-slot bolt fits in to the T-slot running along the outer profile of the lifting column. The T-slot bolts can be used to mount the unit instead of using the upper mounting plate, or/and for attaching other components to the profile.
